capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511) and the encoded proteins
                                                                                  The invention relates to an isolated nucleic acid detection reagent
                                                                                                                      Claim 1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA commissions and pharmaceutical drugs.
                                                                                                                                                     interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    26-MAR-2002

The invention relates to isolated breast tumour proteins and conclude acids that encode them, including immunogenic fragments of the proteins. Also included are expression vectors expressing the corrections. Also included are expression vectors expressing the proteins and substitute the proteins or concluded an antipolate in the protein protein and treatment of concleic acids may be used in the prevention, diagnosis and treatment of concleic acids may be used in the prevention, diagnosis and treatment of concleic acids and their complements may also be used as DNA probes in diagnostic catals and their complements may also be used as DNA probes in diagnostic casasys to detect and quantitrate the presence of similar nucleic acids in concleic, and therefore which patients may be in need of restorative concleins, nucleic acids and antibodies may be used in assays to detect and activity. The antibodies and antagonists may also be used to down regulate expression and activity. The antibodies and antagonists may also be used to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the proteins in casmiles (e.g. by enzyme linked immunosorbant assay (ELISA)) and in other complements for detecting the presence of the proteins in the construction of the proteins in the presence of the proteins in the construction of the proteins in the construction of the proteins in the construction of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAS47012

This protein and its products can be used for identifying compounds which modulate GnRHR II-mediated metabolism in cells. Compounds identified as agonists or antagonists can be used for treating hormone-dependent tumours. Agonists and antagonists may also prove useful in the study of GnRHR II-directed neuromodulation of sexual behaviour, e.g. agonists may be used in the treatment of diminished libido and impotence. The products can also be
                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated type II gonadotropin-releasing hormone receptor - used to develop products for use in the treatment of hormone-dependent tumours or for neuromodulation of sexual behaviour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Type II Gonadotropin releasing hormone receptor; GnRH-H II; impotence; identification; diagnosis; detection; modulator; treatment; libido; hormone-dependent tumour; neuromodulation; sexual behaviour; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel receptor dna useful for identifying apoptosis-modulating substances potentially useful for cancer chemotherapy Patent: DE 19847779-C 1 03-FEB-2000; DEUTSCHES KREBSFORSCH (DE)
                                                                                                                                                                                                                                                            corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em. EMBL; Sw:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AX026089.1 GI:10187520
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         on Aug 31, 2001 this sequence version replaced gi:14161146. During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human DNA sequence from clone RP11-399019
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 (bases 1 to 3212)

RP11-399019 is from the library RPCI-11.2 constructed by the group
of Pieter de Jong. For further details see
                                                                                                 http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 10 constructed by the Sanger Centre Chromosome 10 Mapping Group.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clone. However, there are artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcription of unspliced precursor RNAs, and reverse transcriptase errors that result in single base changes. For further information about this sequence, including its location and relationship to other sequences, please visit our Web Site (http://fruitfly.berkeley.edu) or send email to

  Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
